DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Betsch.

The patent by Betsch (5,868,110) shows a bearing holder (4) for holding a bearing that supports a crankshaft of an internal combustion engine. A rib wall (12) is formed in a side of the bearing support and extends between the bearing holder and the crankcase wall (23). The rib wall is formed in a spherical shape and is located on an upper side of the bearing holder with respect to the axis of the crankshaft. A cavity is formed on a lower side of the bearing holder, the cavity having an opening toward the side of the crankcase and forming part of an oil pan for the engine. A reinforcing rib is located on the bearing holder on the opposite side from the crankcase (Fig. 4).

The patent by Betsch does not teach of making the bearing holder and the rest of the crankcase as two pieces to be affixed together, but of forming the bearing holder and the crankcase as one piece. It is the view of the examiner that the connection of the bearing holder to the crankcase, whether it be two pieces attached by bolt or one piece, is a choice of design.
